4. Section 3 - Page Counts by Template
5. Section 4 - Integrations Analysis
6. Section 5 - Complex Use Cases & Observations
7. Section 6 - Migration Estimates

Executive Summary

Newport-Pleasure.com is a **consumer-facing, age-gated cigarette brand website** built on Adobe Experience Manager (AEM Sites). The site serves as a brand engagement hub, loyalty rewards platform, digital coupon delivery system, and content lounge for adult smokers (21+). It is operated by **R.J. Reynolds Tobacco Company** and features a comprehensive MarTech stack (20+ integrations), a Loyalty Plus rewards program with gamification, user-generated content features (UGC photo contests), and rich interactive content (polls, quizzes, comments).

10	22	~40-55	20+
Page Templates	Blocks / Components	Estimated Total Pages	Integrations

Key Findings: The site is **moderate in page count** (~40-55 pages) but **high in interactive complexity**. Major challenges include: age-gated authentication (all content under `/secure/`), Loyalty Plus rewards integration with pack code scanning, UGC photo upload with moderation (Pleasure POV), gamification engine (polls, comments, likes, points), digital coupon system, 20+ ad-tech/analytics integrations, and a custom REST API backend at `api.newport-pleasure.com`.

Site Architecture Overview

Dimension	Details
CMS Platform	Adobe Experience Manager (AEM Sites) — AEM Core Components with BEM <code>cmp-</code> prefix naming convention. Templates: <code>freeform</code> , <code>bloglanding</code> , <code>unbranded</code> , <code>homepage</code> .
Authentication	Age-gated login (21+). All authenticated content under <code>/secure/</code> . Public pages: login, registration, forgot password.
URL Structure	<code>/</code> (public login/registration) and <code>/secure/</code> (authenticated content)
Brand Owner	R.J. Reynolds Tobacco Company (©2026)
Loyalty Platform	Custom "Loyalty Plus" SDK integrated as AEM clientlib with barcode/QR code scanning for pack code entry
API Backend	<code>api.newport-pleasure.com</code> (authentication, profile, code validation, UGC submissions, coupon management)
Custom Fonts	Newport brand fonts (custom typefaces), IcoMoon icons
Layout Shells	4 distinct layouts: (a) Standard Authenticated with header/footer, (b) Minimal/Unbranded for legal pages, (c) Login Layout for auth flows, (d) External Redirect for third-party links (e.g., Sustainability)
Regulatory	Surgeon General's Warning ("Smoking Causes Lung Cancer, Heart Disease, Emphysema, And May Complicate Pregnancy") persistent on all pages

Section 1 - Templates Inventory

10 distinct page templates were identified across the site, organized into 4 layout shells.

#	Template Name	AEM Template	Complexity	Description / Reasoning	Reference URL(s)
1	Homepage / Login	homepage	High	Dual-purpose page: unauthenticated visitors see the login/registration form with age-gate; authenticated users see a rich homepage with Lounge article carousel, rewards promotion, Pleasure POV (UGC) promo banner, featured content tiles, and promotional messaging. Full hero section with seasonal imagery.	newport-pleasure.com/secure.html
2	Lounge Listing (Blog Landing)	bloglanding	Medium	Content hub listing page for "The Lounge" — Newport's branded content section. Features a hero banner, filterable grid of article cards (with thumbnails, titles, engagement indicators), category filtering, and "Load More" pagination. Each card links to a Lounge article detail page.	the-lounge.html
3	Lounge Article / Poll	freeform	High	Individual Lounge content pages with rich interactive elements. Includes article body, hero image, interactive polls with radio options and image choices, comment system with character counter, like/share functionality, points badges for engagement, and "Related Content" carousel. Variants include article, poll, and quiz formats.	respectfully-disagree.html fan-fantasy-picks.html
4	Promotions / UGC (Pleasure POV)	freeform	Very High	User-generated content contest page ("Pleasure POV"). Features photo upload with camera/gallery access, moderation queue, voting gallery, submission guidelines, promotional hero, and "winning moments" showcase. Handles image uploads, content moderation workflow, and public gallery display. Most complex interactive page on the site.	pleasure-pov.html
5	Products	freeform	Medium	Product showcase page featuring Newport cigarette product lineup. Product cards/tiles with imagery,	products.html

				product names and descriptions, pack visuals, and promotional CTAs. May include product comparison features and flavor/variant details.	
6	Rewards / Loyalty Hub	freeform	High	Loyalty Plus rewards portal. Features pack code entry with barcode/QR scanning, points balance display, rewards catalog, step-by-step instructional guide ("How It Works" with 3-step process), earning history, and redemption interface. Integrates deeply with Loyalty Plus SDK and custom API.	rewards.html
7	Video Content	freeform	Medium	Video-centric content page with embedded video player, video title/description, engagement features (likes, comments), points earning for video viewing, and related content recommendations.	video.html
8	Coupons / Offers	freeform	High	Digital coupon delivery page. Features available coupons list, coupon activation workflow, expiration dates, terms and conditions per coupon, print/digital delivery options. Integrates with notification center and rewards system. Personalized based on user profile.	coupons.html
9	Form / Support	freeform	Medium	Contact form with topic dropdown, message textarea, and submit button. Also used for SMS signup with phone number input and opt-in. FAQ page uses accordion pattern with expandable/collapsible categories. Chat integration and phone click-to-call available.	contact-us.html faq.html sms.html
10	Legal / Unbranded	unbranded	Low	Minimal layout with no standard header/footer chrome. Used for legal documents: Privacy Policy, Terms of Use, Rewards Terms & Conditions. Long-form text with structured headings and paragraph content. Plain white background, minimal styling. Some pages use two-column sidebar layout.	privacy-policy.html terms-of-use.html rewards-terms-and-conditions.html

Section 2 - Blocks / Components Catalog

22 blocks/components were identified. These are grouped into Global (present on all/most pages) and Content blocks.

2.1 Global Components

#	Block Name	Complexity	Description & Behaviour	Reference URL(s)
1	Surgeon General's Warning Banner	Low	Fixed top bar with regulatory health warning. "SURGEON GENERAL'S WARNING: Smoking Causes Lung Cancer, Heart Disease, Emphysema, And May Complicate Pregnancy." Persistent on all pages. Required by federal regulation.	All pages
2	Promotional Banner / Ticker	Medium	Dismissible promotional bar below the warning banner. Dynamic content that changes based on promotions (e.g., "Enter codes, earn rewards" with CTA). Includes close/dismiss button. Content served from API.	All authenticated pages
3	Global Header	High	Newport logo (links to homepage), hamburger menu button, notification bell with dynamic badge count, user profile icon/link. Slide-out notification center panel. Green brand color scheme (#006341). Full-screen mobile navigation drawer on hamburger click.	All authenticated pages
4	Hamburger Navigation Menu	High	Full-screen slide-out navigation. Items include: Home, The Lounge, Pleasure POV, Products, Rewards, Coupons, Contact Us, FAQ, SMS Sign Up, Profile, Logout. Expandable sub-menus with smooth animation transitions. Features user points display and profile quick-access.	All authenticated pages
5	Notification Center	Medium	Slide-out panel triggered by bell icon in header. Shows coupon notifications, rewards updates, and promotional messages. Badge count updates dynamically. Links to relevant pages (coupons, rewards).	All authenticated pages
6	Rewards Bar / Points Display	Medium	Persistent rewards points display bar showing current point balance and code entry shortcut. Quick access to rewards dashboard. Integrates with Loyalty Plus SDK for real-time balance.	All authenticated pages
7	Global Footer	Medium	Newport branding, multi-tier navigation links (primary: Home, Products, Rewards, Coupons, Contact Us, FAQ; secondary: Privacy Policy, Terms of Use, Rewards T&C, Text Messaging T&C, Sustainability). Social media links, legal disclaimers, R.J. Reynolds copyright notice, Surgeon General's Warning repeat.	All authenticated pages

2.2 Content Components

#	Block Name	Complexity	Description & Behaviour	Reference URL(s)
8	Hero Banner	High	Full-width hero with large heading, sub-copy, CTA button, and promotional imagery. Used on homepage, Lounge, Rewards pages. Features seasonal theming and dynamic promotional content. Multiple visual variants (dark/light, left-aligned/centered).	Homepage , Lounge , Rewards
9	Lounge Article Carousel	High	Horizontal scrollable carousel of Lounge article cards on the homepage. Each card has thumbnail image, title, engagement badges (points, likes, comments count), category tag. Touch/swipe support. Auto-advances with manual navigation dots/arrows.	Homepage
10	Code Entry / Pack Scan	Very High	Barcode/QR code scanning interface for pack code entry. Features camera integration for mobile scanning, manual text input fallback, code validation against API, points crediting on success, error handling for invalid/used codes. Core rewards functionality.	Rewards
11	UGC Photo Gallery (Pleasure POV)	Very High	User-generated content gallery with photo upload capability. Features: camera/gallery photo selection, image cropping/filters, upload with caption, moderation queue, public voting gallery with like/share, "winning moments" showcase, contest rules modal. Most complex single component on the site.	Pleasure POV
12	Interactive Poll	High	Interactive voting component with radio button options (text and/or image-based choices). Shows results after voting with percentage bars. Awards points for participation. Includes social sharing after completion. Used in Lounge articles.	Lounge articles
13	Comments System	High	Threaded comment system with character counter, user avatar display, timestamp, like button per comment, reply threading, pagination/load more. Awards points for commenting. Content moderation via API. Used on Lounge articles, polls, and video pages.	Lounge articles
14	Product Carousel / Grid	Medium	Product showcase with cards displaying Newport product imagery, product name, variant details. Carousel/grid layout with smooth transitions. Links to product detail or external purchase points.	Products

15	Step-by-Step Instructional	Low	Sequential step guide ("How It Works") with numbered steps, icons/illustrations per step, and descriptive text. Used on Rewards page to explain code entry → earn points → redeem rewards flow. 3-step variant is most common.	Rewards
16	FAQ Accordion	Medium	Expandable/collapsible FAQ sections organized by category. Click-to-expand individual questions with smooth animation. Categories include: Account, Rewards, Products, General. Multiple items per category.	FAQ
17	Contact Form	Medium	Multi-field contact form with topic/category dropdown, name fields, email, message textarea, and submit button. Client-side validation and server-side submission via API. Success/error state handling.	Contact Us
18	SMS Signup Form	Medium	Phone number input with opt-in checkbox for text messaging alerts. Verification code confirmation step. Terms & conditions link. Integration with SMS gateway for opt-in management.	SMS Signup
19	Modal Disruptor / Interstitial	Medium	Overlay modal used for promotional messaging, contest rules, coupon details, and confirmation dialogs. Features close button, CTA buttons, and content area. Can be triggered programmatically or on page load.	Various pages
20	Activity Teaser / Points Badge	Low	Small card/badge showing points available for an activity (e.g., "+50 pts for completing poll", "+25 pts for commenting"). Used as incentive markers across Lounge articles, polls, and video content. Dynamically shows earned vs. available.	Lounge articles, Polls, Videos
21	Content Toolbar (Like/Share/Comment)	Medium	Inline engagement toolbar with like button (with count), share button (social sharing options), and comment count link. Persists at bottom of content articles. Real-time count updates via API.	Lounge articles, Videos
22	Related Content Cards	Low	"You May Also Enjoy" section with 3–4 content cards linking to other Lounge articles or promotions. Card includes thumbnail, title, and category tag. Algorithmically or editorially curated.	Lounge article pages, Video pages

Section 3 - Page Counts by Template

Estimated page counts based on site navigation, sitemap exploration, and content hub analysis.

#	Template	Estimated Pages	Notes
1	Homepage / Login	2	Public login page + authenticated homepage (same URL, different states)
2	Lounge Listing (Blog Landing)	1	Single listing page with paginated content
3	Lounge Article / Poll	15-20	Individual Lounge articles, polls, and quizzes (e.g., Respectfully Disagree, Fan Fantasy Picks, and ~13-18 additional articles visible in listing)
4	Promotions / UGC (Pleasure POV)	2-3	Pleasure POV main page + potential seasonal promotion pages
5	Products	1-2	Main products page, potentially individual product detail pages
6	Rewards / Loyalty Hub	2-3	Rewards main page, rewards enrollment page, potential rewards catalog sub-pages
7	Video Content	3-5	Video pages (individual videos or video listing)
8	Coupons / Offers	1-2	Coupons listing page, potential promotional landing pages
9	Form / Support	3-4	Contact Us, FAQ, SMS Signup, potential additional support pages
10	Legal / Unbranded	6-8	Privacy Policy, Terms of Use, Rewards T&C, Text Messaging T&C, Site Requirements, Sustainability (external redirect), Do Not Sell My Info, California Privacy
TOTAL ESTIMATED		~40-55	Includes registration/forgot-password auth flow pages (2-3 additional)

Note: Lounge articles represent the bulk of content pages (~15-20). The site relies heavily on dynamic API-driven content (coupons, notifications, rewards) which reduces the total static page count but increases integration complexity.

Section 4 - Integrations Analysis

20+ integrations identified across analytics, advertising, loyalty, security, and platform services.

4.1 Adobe Experience Cloud

#	Integration	Migration Impact	Details
1	Adobe Experience Platform Launch	High	Tag management system orchestrating all analytics and marketing tags. All scripts loaded via Launch container. Must be reconfigured for EDS page structure and event model.
2	Adobe Analytics (AppMeasurement)	High	Full implementation with custom variables, eVars, props, events. Report suite: <code>raiservices.global.prod</code> . Page-level and interaction tracking. Requires event remapping for EDS.
3	Adobe Target	High	A/B testing and personalization via <code>vusevapor.tt.omtrdc.net</code> endpoint. Active experiments across hero banners and promotional content. Mbox placements need recreation in EDS.
4	Adobe Audience Manager	Medium	Audience segmentation and data management. Pixel-based tracking for audience building. DIL library integration with custom signals.
5	Adobe Client Data Layer (ACDL)	Medium	Version 2.0.2. Structured data layer for consistent event tracking. <code>adobeDataLayer.push()</code> calls throughout site. Must be maintained in EDS with proper event dispatching.
6	Adobe Helix RUM	Low	Real User Monitoring via <code>rum.hlx.page</code> . Already present, indicating EDS migration planning is active. Will work natively in EDS.

4.2 Custom Platform Services

#	Integration	Migration Impact	Details
7	Custom REST API	Very High	Backend at <code>api.newport-pleasure.com</code> . Handles: authentication/login, user profile management, pack code validation, UGC submissions/moderation, coupon management, notification delivery, rewards points. Central dependency for all dynamic features.
8	Loyalty Plus SDK	Very High	Custom loyalty program SDK integrated as AEM clientlib. Manages points earning, redemption, code scanning, rewards catalog. Deeply coupled with API backend. Must be extracted and re-integrated for EDS.
9	Barcode / QR Scanner	High	Camera-based barcode/QR code scanning for pack code entry. Uses device camera API. Mobile-first feature for rewards code scanning. Requires JavaScript camera access and image processing library.

10	UGC Platform	High	User-generated content management for Pleasure POV. Photo upload, image processing, content moderation queue, public gallery, voting system. API-driven workflow with multiple states (submitted, moderated, published, featured).
11	Service Worker	Medium	Progressive Web App (PWA) capabilities including offline caching strategy, push notification support, and asset pre-caching. Service worker registration on page load.

4.3 Security & Compliance

#	Integration	Migration Impact	Details
12	Imperva / Incapsula WAF	High	Web Application Firewall protecting the site. Bot detection, DDoS protection, and request filtering. Must be reconfigured for EDS CDN architecture (Fastly-based). May require WAF rule adjustments.
13	hCaptcha	Medium	CAPTCHA challenge on registration pages to prevent bot signups. Client-side hCaptcha widget integration. Must be re-implemented in EDS registration flow.
14	Age Verification Gate	High	Federal requirement for tobacco brand websites. Age verification (21+) before any content access. Session-based authentication with token management. Must be implemented as EDS middleware or client-side gate.

4.4 Analytics & Marketing (Third-Party)

#	Integration	Migration Impact	Details
15	Google Tag Manager / Google Analytics	Medium	Secondary analytics layer alongside Adobe Analytics. Conversion tracking, audience building, and remarketing tags. Tag container needs updating for EDS page structure.
16	Facebook / Meta Pixel	Low	Social media tracking pixel for audience building and conversion tracking. Standard pixel implementation via Launch.
17	Twitter / X Conversion Tracking	Low	Social media conversion pixel for Twitter/X advertising campaigns. Standard tag implementation.
18	DoubleVerify / IAS	Low	Ad verification and brand safety monitoring. Tracks viewability and fraud metrics for advertising campaigns.
19	Lotame / LiveRamp	Low	Data management and identity resolution platforms. Third-party audience data enrichment and cross-device identity matching.
20	OneTrust / Cookie Consent	Medium	Privacy consent management platform. Cookie consent banner, preference center, and consent-gated tag firing. Must integrate with EDS consent architecture.

Shared Infrastructure: Newport-Pleasure.com shares significant infrastructure with other R.J. Reynolds brands (VELO, VUSE, Camel) including the API backend, Loyalty Plus SDK,

authentication system, and much of the MarTech stack. This presents both an opportunity (shared integration patterns) and a risk (cross-brand dependencies).

Section 5 - Complex Use Cases & Observations

5.1 Age-Gated Authentication System

Regulatory Requirement: Federal law requires age verification (21+) for all tobacco brand websites. This is non-negotiable and must be implemented in the EDS migration.

- **Current implementation:** All content lives under `/secure/` path. Public-facing pages limited to login, registration, forgot-password, and legal documents.
- **Login flow:** Email + password authentication, session token management, age verification at registration.
- **Registration:** Multi-step form with age verification, state selection, identity verification, hCaptcha bot protection. Imperva WAF provides additional security layer.
- **EDS challenge:** EDS serves content from CDN (Fastly). Authentication must be implemented as client-side JavaScript gate or custom worker/middleware to protect all `/secure/` content. Token validation against `api.newport-pleasure.com` must happen before content rendering.

5.2 Loyalty Plus Rewards & Pack Code Scanning

- **Core feature:** Users scan cigarette pack barcodes/QR codes using mobile camera to earn rewards points.
- **Components involved:** Code Entry widget (camera + manual input), points balance display, rewards catalog, earning history, step-by-step onboarding guide.
- **Technical complexity:** Camera API access (`getUserMedia`), barcode scanning library, real-time API validation, points crediting, error handling for invalid/duplicate codes.
- **EDS challenge:** Loyalty Plus SDK is currently an AEM clientlib. Must be extracted, potentially refactored, and loaded as an EDS block dependency. Camera scanning requires secure context (HTTPS) and user permission handling.

5.3 User-Generated Content (Pleasure POV)

- **Feature:** Photo contest where users upload photos that go through moderation and appear in a public voting gallery.
- **Workflow:** Photo capture/selection → Crop/filter → Caption → Submit → Moderation queue → Published → Voting/likes → Featured winners.
- **Technical complexity:** File upload to API, image processing/resizing, content moderation workflow (API-driven), gallery rendering with lazy loading, voting system with rate limiting.
- **EDS challenge:** This is the most complex single feature. Requires custom block with multi-step upload flow, API integration for all CRUD operations, and real-time gallery updates. Consider implementing as a dedicated web component or embedding a micro-frontend.

5.4 Gamification & Social Engagement Engine

- **Features:** Polls with image/text options, comments with threading, likes with counts, points badges on activities, share functionality.
- **Points economy:** Users earn points for: viewing content, completing polls, posting comments, watching videos, uploading photos. Points displayed as badges (" +50 pts") on content cards.
- **Technical complexity:** Real-time engagement counters (likes, comments), poll state management (voted/not voted), comment moderation, points crediting via API, social share deep-links.
- **EDS challenge:** Multiple interactive blocks that share state (user points, engagement history). Requires centralized state management approach in EDS (likely a shared JavaScript module) and consistent API integration patterns.

5.5 Digital Coupon System

- **Feature:** Personalized digital coupons delivered based on user profile and behavior.
- **Components:** Coupon listing with expiration dates, coupon activation workflow, print/digital delivery options, terms per coupon.
- **Technical complexity:** Personalized API responses, coupon state management (available/activated/used/expired), notification integration for new coupons.
- **EDS challenge:** Fully API-driven, no static content. Block must handle all coupon states and transitions. Integration with notification center for real-time updates.

5.6 Regulatory Compliance

- **Surgeon General's Warning:** Must appear on every page. Currently a fixed top banner. Non-negotiable federal requirement.
- **Age verification:** 21+ requirement for all content access. Must be maintained in EDS.
- **Privacy compliance:** CCPA "Do Not Sell My Info" link, comprehensive privacy policy, cookie consent management.
- **Advertising restrictions:** Tobacco advertising regulations affect what content can be shown and how. Marketing claims must comply with FDA guidelines.
- **EDS consideration:** Regulatory requirements must be wired into the EDS header/footer fragments and authentication middleware from day one. No content should be accessible without age verification.

5.7 External Redirects & Cross-Brand Architecture

- **Sustainability page:** Redirects to an external R.J. Reynolds corporate sustainability page rather than hosting content locally.
- **Shared infrastructure:** Newport shares API backend, Loyalty Plus SDK, and authentication system with sibling brands (VELO, VUSE, Camel). This means API changes during Newport migration could affect other brands.
- **EDS consideration:** Cross-brand API dependencies must be mapped and tested. Consider creating shared EDS libraries for common functionality (auth, Loyalty Plus, analytics).

5.8 Progressive Web App (PWA) Features

- **Service Worker:** Active service worker for offline caching and push notifications.

- **Impact:** EDS has its own service worker for performance optimization. Custom service worker logic (push notifications, offline caching) must be carefully merged or replaced.

Section 6 - Migration Estimates

Effort estimates for migrating Newport-Pleasure.com to Adobe Edge Delivery Services (EDS). Estimates assume a team familiar with EDS patterns and the R.J. Reynolds platform ecosystem.

6.1 Summary Estimates

Category	Effort Estimate	Complexity	Notes
Overall Migration	14-20 weeks	High	Full migration including design system, all blocks, integrations, content migration, and QA. Assumes parallel workstreams.
Design System & Global Styles	2-3 weeks	Medium	Newport brand colors (#006341 green, #C8A951 gold), typography, spacing tokens, responsive breakpoints. Regulatory warning banner styling.
Global Components (Header, Footer, Nav)	2-3 weeks	High	Header with hamburger nav, notification center, rewards bar, and footer with multi-tier navigation. Surgeon General's Warning banner.
Authentication / Age Gate	3-4 weeks	Very High	Client-side auth gate, token management, API integration, registration flow with hCaptcha, forgot password. Regulatory requirement — blocks all other work.
Content Blocks (Static)	2-3 weeks	Medium	Hero, product carousel, step-by-step, related content cards, FAQ accordion, activity teasers. Standard EDS block patterns.
Interactive Blocks (Dynamic)	4-5 weeks	Very High	Poll, comments system, content toolbar (like/share), UGC photo gallery, code entry/scanner, coupon system. All require API integration.
Loyalty Plus / Rewards Integration	2-3 weeks	Very High	SDK extraction from AEM clientlib, re-integration in EDS, barcode scanning, points management, rewards catalog. Critical path dependency.
Analytics & MarTech	2-3 weeks	High	Adobe Launch reconfiguration, Analytics event remapping, Target mbox recreation, ACDL data layer, 15+ third-party tags. Can run in parallel with block development.
Content Migration	1-2 weeks	Medium	~40-55 pages. Lounge articles (~15-20) are the bulk. Legal pages are straightforward. Dynamic content (coupons, rewards) is API-driven (no migration needed).
QA & UAT	2-3 weeks	High	Cross-browser testing, mobile responsiveness, accessibility audit, regulatory compliance verification, performance optimization (Lighthouse 100 target).

6.2 Block-Level Effort Estimates

Block	Effort (Days)	Complexity	Key Challenges
Surgeon General's Warning	0.5	Low	Static text, regulatory fixed content
Promotional Banner / Ticker	1-2	Medium	Dismissible, API-driven dynamic content
Global Header	3-4	High	Hamburger nav, notification bell, rewards display, responsive
Hamburger Navigation	2-3	High	Full-screen overlay, sub-menus, animations, profile display
Notification Center	2-3	Medium	Slide-out panel, real-time badge count, API integration
Rewards Bar	1-2	Medium	Real-time points balance, Loyalty Plus SDK integration
Global Footer	1-2	Medium	Multi-tier navigation, responsive, legal disclaimers
Hero Banner	2-3	High	Multiple visual variants, seasonal theming, animations
Lounge Article Carousel	2-3	High	Touch/swipe support, dynamic content, engagement badges
Code Entry / Pack Scan	5-7	Very High	Camera API, barcode scanning library, API validation, points crediting
UGC Photo Gallery (Pleasure POV)	7-10	Very High	Photo upload, image processing, moderation workflow, voting gallery, contest rules
Interactive Poll	2-3	High	Voting mechanics, results display, points award, state management
Comments System	3-4	High	Threading, moderation, character counter, pagination, points
Product Carousel / Grid	1-2	Medium	Standard carousel pattern, product card layout
Step-by-Step Instructional	0.5-1	Low	Static layout with numbered steps
FAQ Accordion	1	Medium	Expand/collapse, category grouping
Contact Form	1-2	Medium	Form validation, API submission
SMS Signup Form	1-2	Medium	Phone validation, verification step, opt-in management
Modal Disruptor	1	Medium	Overlay pattern, multiple content types, trigger logic
Activity Teaser / Points Badge	0.5	Low	Small UI component, API-driven earned/available state
Content Toolbar	1-2	Medium	Like/share/comment counts, real-time updates, social sharing
Related Content Cards	0.5-1	Low	Standard card layout, API or editorial content

6.3 Risk Assessment

Risk	Severity	Mitigation
Authentication / Age Gate architecture for EDS	Very High	Prototype auth middleware early. Consider Cloudflare Workers or Fastly VCL for server-side token validation. Client-side fallback as backup. This is the #1 critical path item.
Loyalty Plus SDK extraction from AEM	High	Engage Loyalty Plus team early. May need SDK refactoring to remove AEM dependencies. Consider creating a standalone JavaScript library.
Cross-brand API dependencies	High	Map all API dependencies shared with VELO/VUSE/Camel. Coordinate API versioning. Avoid breaking changes that affect other brand sites.
UGC feature complexity (Pleasure POV)	High	Consider phased approach: launch without UGC, add in Phase 2. Or embed as a micro-frontend with dedicated deployment.
Imperva WAF + EDS CDN compatibility	Medium	Test Imperva rules against EDS CDN (Fastly) responses early. May need rule adjustments to avoid false positives on EDS-served content.
Regulatory compliance during transition	High	Surgeon General's Warning and age gate must be present from day one. No "soft launch" without compliance. Legal review required before go-live.
Performance with heavy MarTech stack	Medium	Audit all 20+ tags. Defer non-critical tags to delayed loading. Target Lighthouse 100 score. May need to reduce tag count.

6.4 Recommended Migration Phases

Phase 1 - Foundation (Weeks 1-4)

- Design system extraction and EDS theme setup (brand colors, fonts, spacing)
- Authentication / age gate prototype and implementation
- Global header, footer, Surgeon General's Warning banner
- Regulatory compliance validation

Phase 2 - Core Content (Weeks 5-9)

- Hero banner, product carousel, step-by-step instructional
- Lounge article template and carousel
- FAQ accordion, contact form, SMS signup form
- Legal/unbranded page template
- Content migration for static pages (~20-30 pages)

Phase 3 - Interactive Features (Weeks 10-15)

- Interactive poll, comments system, content toolbar
- Coupons / offers system
- Loyalty Plus / Rewards integration with pack code scanning
- Notification center and rewards bar
- Remaining content migration (~10-25 pages)

Phase 4 - Advanced Features & QA (Weeks 16-20)

- UGC Photo Gallery (Pleasure POV) — most complex feature
- Analytics & MarTech stack migration (Launch, Analytics, Target, AAM)
- Cross-browser and mobile testing
- Accessibility audit (WCAG 2.1 AA)
- Performance optimization (Lighthouse 100 target)
- Regulatory compliance review and legal sign-off
- UAT and go-live preparation

Key Recommendation: Start with the authentication/age gate (Phase 1) as it is the critical path blocker. No other content or feature can be tested without it. Engage the Loyalty Plus SDK team and API backend team early (Week 1) to plan extraction and integration strategy.

Cross-Brand Synergy: If VELO or other R.J. Reynolds brands are also migrating to EDS, significant effort can be saved by creating shared EDS libraries for authentication, Loyalty Plus, analytics, and common UI components. Recommend coordinating migration timelines across brands.
