KodiakIsKing.com — Comprehensive Site Analysis

Executive Summary

KodiakIsKing.com is an age-gated consumer brand website for **Kodiak** moist snuff and pouches, operated by **American Snuff Company, LLC** (a subsidiary of Reynolds American Inc. / BAT). The site requires 21+ age verification via RAI's shared VIA/SSO authentication system and serves as the primary digital engagement platform for adult tobacco consumers of Kodiak products.

The site is built on **Adobe Experience Manager (AEM) as a Cloud Service** with a component-based architecture. It is notably one of the **simplest and most focused** RAI brand sites analyzed, with a streamlined product-centric design. Key integrations include Adobe Marketing Cloud (Analytics, Target, Audience Manager, Launch), Facebook Pixel, Google Maps, and a proprietary brand API at `api.kodiakisking.com`. The site has a dark, premium aesthetic with heavy use of product imagery (tin cans) and bold typography.

Product Classification: MOIST SNUFF (carries "WARNING: This product can cause mouth cancer." — not Surgeon General's Warning)

Brand Tagline: "Kodiak is King" / "Accept No Substitutes"

Migration Complexity: Low-Medium — estimated **55–85 person-days** for full Edge Delivery Services migration. This is among the simplest RAI brand sites due to its focused scope and lack of complex interactive features (no sweepstakes, no community content, no timeline).

1. Templates Inventory

1.1 Age Gate / Login Template

- **URL:** <https://www.kodiakisking.com/> (redirects to `/secure.html` when authenticated)

5. Complex Use Cases & Observations

5.1 Video Hero Background (Medium Complexity)

The homepage features a **video background** in the hero section:

- Full-width video element with autoplay behavior
- Kodiak Wintergreen tin overlaid on video
- Responsive video scaling across devices
- Video likely served from Brightcove or CDN

Instances: 1 (Homepage only) **Found:** `/secure.html` **Why Complex:** Video hero requires careful handling of autoplay policies, responsive video sizing, and performance optimization. Video background is not a standard EDS pattern and requires custom block development.

Estimated Effort: 3–5 person-days

5.2 Personalized Coupon System (High Complexity)

The offers page demonstrates personalization:

- **Dynamic greeting** using authenticated user's first name ("NIHAR, YOU HAVE")
- **Dual-channel offer tabs:** MAIL vs MOBILE with counts
- **Year-to-date savings tracker:** "\$0.00 YOUR 2026 CLAIMED SAVINGS"
- **5-minute expiration timer** on mobile coupons
- **4-step redemption flow** with visual guide
- **Backend coupon management** via `api.kodiakisking.com`

Instances: 1 page, multiple dynamic components **Found:** `/secure/offers.html` **Why Complex:** Tightly coupled to brand API for coupon retrieval, personalization, savings tracking, and redemption. Timer components require real-time behavior.

Estimated Effort: 10–14 person-days

5.3 Store Locator with Google Maps (High Complexity)

The Find Kodiak page integrates a full Google Maps experience:

- Interactive map with store markers
- Geolocation (browser GPS permission)
- Zip code search with "Find Kodiak" CTA
- **Product filtering** — unique "Filter by Product" button not seen on all RAI sites
- Store results with addresses, distances, and "Get Directions" links
- Numbered markers matching between list and map

Instances: 1 page **Found:** `/secure/find-kodiak.html` **Why Complex:** Google Maps JavaScript API integration, geolocation permissions, store data API, product filtering logic, and responsive map/list layout.

Estimated Effort: 5–8 person-days

5.4 MFA / Profile Management (High Complexity)

My Profile requires multi-factor authentication:

- Email-based one-time passcode (OTP)
- Console logs show “MFA recursing for page parent” — MFA component recursively checks container
- Profile editing: name, address, state (50 states + DC dropdown), email, password
- Communication preferences management
- Logout flow

Instances: 1 page **Found:** /secure/my-profile.html **Why Complex:** MFA flow requires server-side OTP generation and validation via brand API. The recursive MFA component behavior adds frontend complexity.

Estimated Effort: 5–8 person-days

5.5 Cross-Brand VIA/SSO Authentication (High Complexity)

Authentication uses RAI's shared VIA/SSO system:

- viasso=true parameter enables cross-brand SSO
- Shared authentication across Kodiak, Grizzly, Pall Mall, Camel, and other RAI brands
- Age verification (21+) with identity matching
- Session management with secureAuto.js script
- Service Worker for API caching with resource-cache-service-worker.js

Instances: Global (affects all pages) **Found:** All authenticated pages **Why Complex:** Authentication is a cross-brand dependency managed by RAI's identity platform. Any migration must integrate with the existing VIA/SSO infrastructure.

Estimated Effort: 8–12 person-days

5.6 Facebook Pixel Tracking (Low Complexity)

Unlike some other RAI brand sites, Kodiak **includes Facebook Pixel**:

- Pixel ID: 481080119534257
- Full fbevents.js integration with extensive event parameter list
- Tracks page views, conversions, and user interactions

Instances: All pages **Found:** Global **Why Complex:** Simple embed, but requires proper event mapping during migration to ensure marketing attribution continuity.

Estimated Effort: 1–2 person-days

5.7 Minimal Site Scope — Key Observation

Kodiak is the **most focused RAI brand site** analyzed:

- **No sweepstakes/promotions** (unlike Pall Mall, Camel)
- **No community content wall** (unlike Pall Mall)
- **No interactive timeline** (unlike Pall Mall)
- **No SMS signup page** (unlike Pall Mall, Grizzly)
- **No Federal Court corrective statements** (this is moist snuff, not cigarettes)
- **No Brightcove video player** (video is embedded differently)
- **Only 6 products** with straightforward catalog
- **Single social link** (Instagram only)

This simplicity makes Kodiak an excellent **pilot candidate** for RAI brand site EDS migration.

6. Migration Estimates

6.1 Summary Estimate

Category	Low Estimate	High Estimate
Design System & Global Styles	5 days	8 days
Header / Navigation / Footer	4 days	6 days
Health Warning Banner	1 day	2 days
Authentication (VIA/SSO)	8 days	12 days
Homepage (with Video Hero)	5 days	8 days
Products Page	3 days	4 days
Offers / Coupons	10 days	14 days
Find Kodiak (Store Locator)	5 days	8 days
My Profile (MFA)	5 days	8 days
Contact Us (Chat + Email)	3 days	5 days
FAQ Page	2 days	3 days
Legal / Compliance Pages (3 pages)	2 days	3 days
Facebook Pixel + Analytics	1 day	2 days
Service Worker / Caching	2 days	3 days
Integration Testing & QA	6 days	10 days
TOTAL	55 days	85 days

6.2 Effort Breakdown by Skill

Skill Area	Percentage	Days (Avg)
Frontend Development (HTML/CSS/JS)	35%	19–30 days
API Integration & Backend Services	25%	14–21 days
Authentication & Security	15%	8–13 days
Content Migration	10%	6–9 days
Design / UX Adaptation	8%	4–7 days
Testing & QA	7%	4–6 days

6.3 Critical Path Items

1. **VIA/SSO Authentication Integration** — Blocks all authenticated page development
2. **Brand API (api.kodiakisking.com) Integration** — Required for coupons, profile, store locator
3. **Google Maps Integration** — Required for Find Kodiak page
4. **Video Hero Implementation** — Custom block for homepage video background
5. **Health Warning Banner** — Must be present on all pages (legal compliance)

6.4 Risk Factors

Risk	Impact	Mitigation
Brand API availability/documentation	High	Early API discovery and documentation phase
VIA/SSO integration complexity	High	Engage RAI identity team early; reuse patterns from other RAI migrations
Video hero performance	Medium	Use EDS-optimized video loading patterns
MyFonts licensing	Low	Verify font license covers EDS domains
Facebook Pixel event mapping	Low	Document all current events before migration

6.5 Recommended Migration Phases

Phase 1: Foundation (Weeks 1–2)

- Design system extraction and CSS custom properties (dark theme, green accents)
- Global components (health warning, header, footer, navigation)
- Authentication integration (VIA/SSO)
- Legal/compliance pages (static content)

Phase 2: Core Pages (Weeks 3–5)

- Homepage with video hero and product grid
- Products catalog with alternating card layout
- FAQ with accordion components
- Contact Us with email form and chat

Phase 3: Complex Features (Weeks 6–8)

- Offers/Coupons with personalization and dual-channel tabs
- Find Kodiak store locator with Google Maps
- My Profile with MFA

Phase 4: Polish & QA (Weeks 9–10)

- Integration testing across all pages
- Performance optimization (target: Lighthouse 100)
- Accessibility audit (WCAG 2.1 AA)
- Facebook Pixel event verification
- Cross-browser and mobile testing

6.6 Pilot Migration Recommendation

Given Kodiak's **minimal scope** (11 pages, 30 components, no sweepstakes, no UGC), it is the strongest candidate among analyzed RAI brand sites for a **pilot EDS migration**:

Factor	Kodiak	Pall Mall	Grizzly
Page Count	~11	~17-19	~17-20
Components	30	38	35
Estimated Days	55-85	85-130	97-146
Sweepstakes	No	Yes	No
Community Content	No	Yes	No
Federal Court Notice	No	Yes	No
Complexity	Low-Medium	Medium-High	Medium-High
