

AEM SITE ANALYSIS REPORT

Device Partner Center

Comprehensive Site Analysis for Edge Delivery Services Migration

<https://devicepartner.microsoft.com/en-US/>

Date: February 27, 2026

Scope: Templates, Components, Integrations, Migration Estimates

Current Platform: Sitecore CMS → **Target:** Adobe Edge Delivery Services

Table of Contents

1. [Executive Summary](#)
2. [Templates Inventory](#)
3. [Blocks & Components Catalog](#)
4. [Page Count by Template](#)
5. [Integrations & Embedded Services](#)
6. [Complex Use Cases & Special Observations](#)
7. [Migration Estimates](#)
8. [Screenshots Reference](#)

Executive Summary

7 Page Templates (5 in-scope for migration)	16 Unique Blocks / Components	~60-80 Estimated Public Pages (en-US)	13 Third-Party Integrations
---	---	---	---

Key Finding: Device Partner Center (DPC) is built on **Sitecore CMS** with the same `flex-*` / `mssc` component framework as `partner.microsoft.com`. The site is **heavily auth-gated**—most product and resource pages require Microsoft Entra ID sign-in and DPC registration. Publicly accessible pages are limited to the homepage, getting-started guide, public communications, some asset detail pages, support/FAQ, and contact form. The authenticated dashboard and personalized content behind login walls represent a significant portion of the site that falls outside typical EDS migration scope.

CMS Platform: Sitecore, evidenced by `CDP.js`, `/mssc/` asset paths, Sitecore CDP/Engage integration, and `.ashx` handler files.

Key Distinction from `partner.microsoft.com`: DPC uses the same Sitecore framework but has a **simpler footer** (no multi-column link grid), **email-only sharing** (no social media links), and a **pervasive auth-gate pattern** where content is shown/hidden based on registration status and partner type.

1. Templates Inventory

#	Template Name	Purpose	Complexity	Example URL(s)	Variations / Conditional Logic
1	Homepage	Primary landing page with hero, registration callout, category cards, CTA banner, and asset carousel.	High	/en-US/	- Two notification banners (MSA retirement + registration prompt) shown to unauthenticated users - Carousel content is dynamically populated from recent assets - Authenticated users likely see a personalized homepage with bookmarks and alerts
2	Product Landing Page	Category hub pages for each product line (Windows, M365, Teams, etc.). Hero + registration callout. Content hidden behind auth.	Medium	/en-us/windows , /en-us/teams , /en-us/gaming , /en-us/edu-prod-solutions-page , /en-us/iot	- Unauthenticated: shows hero + registration CTA only - Authenticated: shows full product resources, assets, and documentation - Some pages are fully gated (Teams shows "Please sign in" message) - Others (Windows) show partial public content
3	Content/Guide Page	Rich content pages with hero, text+image sections, icon cards, accordion/tabs, FAQ, and CTA sections. Used for getting-started guides and informational pages.	High	/getting-started-guide	- Contains multiple block types: hero, text+CTA, icon cards, vertical tabs, image+text overlay, FAQ accordion - Most complex public-facing template
4	Communication / Article Page	Rich-text article pages for partner communications, announcements, and how-to guides. Title + date metadata + body text with embedded images and links.	Medium	/communications/comm-msc-modernization-entra-id-sign-in-new-key-bridge-tools , /communications/comm-registration-account-management	"Applies to" field controls visibility (e.g., "Publicly available" vs. partner-type-specific) - Some have accordion sections for collapsible content - Embedded Vimeo videos in some articles - Inline screenshots/images within body content
5	Asset Detail Page	Downloadable asset pages with thumbnail preview, download button, metadata (date, file size, access level), and "More like this" carousel.	Medium	/assets/detail/entra-id-key-bridge-onboarding-ffki-direct-model-pdf	- Lock icon for auth-gated assets - Download size displayed dynamically - Preview overlay on thumbnail hover "More like this" section populated algorithmically
6	Support / FAQ Page	Support hub with hero, registration CTA banner, grouped accordion FAQ sections, and contact CTA.	Medium	/en-us/support	- Multiple accordion groups organized by topic - Hero with dark overlay - Full-width CTA banner (dark purple background)
7	Contact / Form Page	Support request form with hero banner, left-column description, right-column form with cascading dropdowns, CAPTCHA, and submit button.	High	/en-us/contact-us	- Cascading dependent dropdowns (Program → Reason → Issue) - CAPTCHA image for bot prevention - Hidden "Path" field auto-populated with referrer URL

#	Template Name	Purpose	Complexity	Example URL(s)	Variations / Conditional Logic
					Server-side form processing

2. Blocks & Components Catalog

2.1 Global Components

#	Block / Component	Complexity	Description & Behaviors	Screenshot	Notes
1	Global Header / Navigation	High	Microsoft logo, "Device Partner Center" branding, 4 nav items (Products & Solutions, Marketing, Licensing & Programs, More) with dropdown menus, Dashboard link, Search button, Sign in/Register link. Responsive hamburger on mobile.	dpc-nav-products.png	Dropdown menus are single-level lists (simpler than partner.microsoft.com mega-menus). Search triggers a full-page search overlay. Dashboard link redirects to external registration portal.
2	Notification Banner (Red)	Low	Dismissible red/orange alert banner with info icon, text content, and close button (x). Used for MSA retirement notice.	dpc-homepage-desktop.png	Cookie-persisted dismiss state. Red background with white text. Component: <code>flexnotification</code> .
3	Notification Banner (Yellow/Warning)	Low	Dismissible yellow/cream warning banner with warning icon, rich text (including links), and close button. Used for registration prompt.	dpc-homepage-desktop.png	Contains inline links. Slightly different styling from red variant. Same <code>flexnotification</code> component with different theme.
4	Share / Feedback Bar	Low	"Share" with email icon + "Was this page helpful?" Yes/No buttons. Simpler than partner.microsoft.com (email only, no social media).	dpc-homepage-desktop.png	Present on all pages. No social media sharing (email only via <code>mailto:</code>). Feedback submits to analytics.
5	Global Footer	Low	Single-row footer with locale selector, Consumer Health Privacy, Your Privacy Choices, Contact us, Privacy & cookies, Terms of use, Trademarks, copyright. Much simpler than partner.microsoft.com (no multi-column link grid).	dpc-homepage-desktop.png	Minimal footer. Locale selector links to <code>/localeselection</code> page.

2.2 Content Blocks

#	Block / Component	Complexity	Description & Behaviors	Found On	Notes
6	Hero (flex-hero-v2)	Medium	Two-column hero: left text (H1, description, CTA buttons) + right image. Variants: standard light background, dark overlay with text overlay on image.	Homepage, Windows, Getting Started, Support	JS: <code>flexhero</code> . Support page uses dark image overlay variant. Getting Started uses standard light variant.
7	Registration Callout (two-column)	Medium	Two-column section: left has H2, description, CTA button; right has paragraph text + bullet list. Used specifically for the "You must register" messaging.	Homepage, Windows	Consistent pattern across product pages. Contains registration-specific messaging and links to <code>dpcregistration.microsoft.com</code> .
8	Icon Card Grid (4-up)	Medium	4-column grid of cards with colorful illustrations/icons at top, H3 heading, description text. No CTA links in public view (likely linked when authenticated).	Homepage	Categories: Marketing resources, Pricing & licensing, Technical resources, Training & readiness. Uses <code>flexcontainer</code> component.
9	CTA Banner (centered)	Low	Full-width light blue/bordered banner with centered H2, description text, and outlined CTA button. Used for "Get started" callouts.	Homepage	Clean, simple centered layout. Links to tutorial/getting-started content.
10	Asset Carousel (CQC Carousel V2)	High	Horizontal scrolling carousel of asset cards. Each card: thumbnail image, download icon with file size, lock icon (auth-gated), title link, description, date. Prev/next arrows, dot pagination, auto-play with pause button.	Homepage, Asset Detail ("More like this")	JS: <code>assetlib2/ellipsisv2</code> . Auto-rotates. Cards show download size, lock status. Links to asset detail pages. 8 dots = 8 slide positions.
11	Icon Feature Cards (3-up)	Medium	3-column grid with illustration icons, H4 heading, description, CTA link. Used for registration steps (Sign in, Set up preferences, Check profile).	Getting Started	Uses <code>feedunit</code> component. Similar to homepage cards but 3 columns with more prominent CTAs.

#	Block / Component	Complexity	Description & Behaviors	Found On	Notes
12	Vertical Tabs + Image Overlay	High	Left column: H2 heading + subtitle + vertical tab buttons. Right column: image with overlaid text panel (H3, description, CTA button). Tab selection changes the right-side content.	Getting Started	Complex interactive component. Tabs: "Accessing content", "Creating email preferences", "Adding to favorites", "Updating profile". Right panel has dark overlay on image.
13	FAQ Accordion	Medium	Grouped accordion with expandable/collapsible sections. "Expand All" button. Chevron indicators. Sections grouped by topic headings (H2).	Getting Started, Support	Support page has 3 accordion groups with 11+ items total. Getting Started has single group with 4 items. Uses custom accordion JS.
14	Full-Width CTA Section (dark)	Low	Dark purple/black background full-width section with H2, description, and outlined CTA button. Used for registration and contact prompts.	Support, Contact Us	Support page: "Register today..." section. Contact page hero uses similar dark background pattern.
15	Contact Form	High	Two-column layout: left description + FAQ link, right form with text inputs, cascading dropdowns (Program → Reason → Issue), textarea, hidden path field, CAPTCHA image, submit button.	Contact Us	Cascading dropdowns are JS-driven. CAPTCHA is server-rendered image. Form submits to server-side handler. Requires significant custom EDS block development.
16	Asset Detail Block	Medium	H1 title, date metadata (Created/Last Modified), two-column layout: left thumbnail with preview overlay, right download button (with file size), "Applies to" access level, description text.	Asset Detail pages	Download links point to <code>assetsprod.microsoft.com</code> . Preview overlay triggers modal/lightbox. File sizes displayed dynamically.

3. Page Count by Template

Template	Est. Public Pages	Est. Auth-Gated Pages	Migration Classification	Justification
Homepage	1	1 (personalized)	Manual	Unique page with multiple block types, carousel, and conditional content based on auth state. Requires custom block development.
Product Landing Pages	2-3 (partial public)	7+ (full content behind auth)	Partial Auto	Public shells are simple (hero + registration CTA). Full authenticated versions contain rich resource libraries. Public portion is auto-migratable; auth content requires access to crawl.
Content/Guide Pages	3-5	5-10	Manual	Complex layouts with multiple block types (tabs, accordions, icon cards). Each page has unique arrangement. Requires manual content mapping.
Communication / Article Pages	15-25	20-40	Auto	Standardized structure (title + metadata + rich text body). Consistent content model. Bulk-importable with automated tooling. Some have embedded videos/accordions requiring validation.
Asset Detail Pages	10-20	50-100+	Auto	Highly standardized layout (thumbnail + download + metadata + related carousel). Bulk-importable. Asset files hosted externally on <code>assetsprod.microsoft.com</code> .
Support / FAQ Page	1	0	Manual	Unique page with accordion groups, hero, and CTA banner. Requires custom accordion block development.
Contact / Form Page	1	0	Manual	Server-side form with cascading dropdowns and CAPTCHA. Requires backend integration or form service replacement (e.g., Adobe Forms).
TOTAL (estimated)	~33-56	~83-158+	—	Public pages are relatively few; bulk of content is behind authentication

Auth-Gated Content: The majority of DPC content is behind Entra ID authentication. The page counts above for auth-gated pages are estimates based on navigation structure and carousel content. A full crawl of authenticated content would require partner credentials.

4. Integrations & Embedded Services

#	Integration	Type	Complexity	Example URL(s)	Notes
1	Tealium Tag Manager	Tag Management (inline script)	High	All pages	Primary tag orchestrator (<code>tags.tiqcdn.com/utag/msft/mpartner/prod/utag.js</code>). Loads multiple sub-tags (<code>utag.9.js</code> , <code>utag.10.js</code>). Includes Tealium Visitor Service for cross-domain ID stitching.
2	Microsoft Clarity	Analytics/Heatmaps (inline script)	Medium	All pages	Session recording and heatmaps (<code>scripts.clarity.ms</code> , <code>tag_q48pqaamdk</code>). Separate wrapper: <code>MSClarity.js</code> .
3	Sitecore CDP / Engage	Personalization (inline script)	Very High	All pages	Real-time personalization engine (<code>sitecore-engage-v.1.3.0.min.js</code>). Web Flow libs for A/B testing. Deep CMS integration driving content personalization based on partner type.
4	Azure Application Insights	APM / Monitoring (inline script)	Medium	All pages	Performance monitoring (<code>az416426.vo.msecnd.net/scripts/a/ai.0.js</code> + <code>js.monitor.azure.com</code>). Tracks page loads, errors, custom telemetry.
5	Microsoft Cookie Consent	Privacy/Compliance (inline script)	Medium	All pages	GDPR/CCPA consent banner (<code>wcpstatic.microsoft.com/mscc/lib/v2/wcp-consent.js</code>). Wrapper: <code>CookieConsent.js</code> . Controls loading of other scripts.
6	OpenID Connect / Entra ID Auth	Authentication (server-side + redirect)	High	All pages (Sign in link)	Authentication via <code>/_login?authType=OpenIdConnect</code> . Redirects to Microsoft identity platform. Registration via external portal: <code>dpcregistration.microsoft.com</code> .
7	DPC Registration Portal	External application (redirect)	High	Dashboard link, Register buttons	Separate application at <code>dpcregistration.microsoft.com</code> . Handles partner registration, profile management. Returns via redirect URL parameter.
8	Chatbot	Customer Support (embed)	Med-High	All pages	Custom chat widget (<code>chatBot.js</code>). Likely Azure Bot Service. Provides automated support assistance.
9	Microsoft Survey Broker	Feedback/Survey (inline script)	Low-Med	All pages	Intercept survey system (<code>microsoft.com/library/svy/partner/broker.js</code> + config). Triggers survey modal on certain user actions.
10	Medius Video	Video/Media (inline script)	Low-Med	Pages with video content	Video conversion/player library (<code>medius-video-convert.js</code>). Handles embedded video playback.
11	Vimeo Embeds	Video/Media (embed)	Low	Registration guide communication	Vimeo player embeds (<code>player.vimeo.com</code>) in article/communication pages for instructional videos.
12	Asset CDN (assetsprod.microsoft.com)	Content Delivery (external links)	Low	Asset detail pages	Downloadable files (PDFs, ZIPs) hosted on <code>assetsprod.microsoft.com/oem/</code> . Download links point to this external CDN.
13	Sitecore CMS Backend	Content Management (server-side)	Very High	Entire site	All content managed in Sitecore. Evidenced by <code>CDP.js</code> , <code>/mssc/</code> asset paths, <code>.ashx</code> handlers. Content delivery via Sitecore rendering pipeline.

5. Complex Use Cases & Special Observations

#	Issue	Severity	Description	Where It Occurs	Instances
1	Pervasive Auth-Gated Content	Critical	Most product pages, asset libraries, and resource content are hidden behind Microsoft Entra ID authentication + DPC registration. Unauthenticated users see only hero + registration CTAs. This means the majority of site content cannot be crawled or migrated without authenticated access. EDS pages are static/CDN-served and require a separate auth strategy.	Product pages (/windows , /teams , etc.), asset pages, Marketing, Licensing sections	~70-80% of all pages
2	Role-Based Content Personalization	High	Content visibility is determined by partner type, registration status, NDA agreement, and user preferences. Sitecore CDP drives targeted content experience. Different users see different resources on the same URL. Three access tiers: Anonymous, Registered, Validated.	All authenticated pages	Site-wide
3	Sitecore CDP Personalization	High	Real-time personalization via Sitecore CDP/Engage (A/B testing, web flows, targeted content). Migrating to EDS loses this layer unless replaced with equivalent solution (Adobe Target, AEM Experimentation).	All pages	Site-wide
4	Contact Form with Cascading Dropdowns	High	Server-side support form with dependent dropdowns (Program → Reason → Issue), CAPTCHA validation, and server-side processing. Cannot be replicated with simple static HTML. Requires a form service backend or third-party form solution.	/contact-us	1 page
5	Asset Carousel with Dynamic Content	Medium	Homepage and asset detail pages use a JS-heavy carousel (CQC Carousel V2) that dynamically loads recent assets. Auto-plays with pause control, dot pagination, prev/next navigation. Cards show file sizes, lock icons, and dates.	Homepage, Asset Detail pages	~20-30+ pages
6	External Registration Portal	Medium	Registration and profile management handled by a separate application at dpcregistration.microsoft.com . Dashboard link redirects there with return URL parameter. This external dependency must be preserved in any migration.	All registration links, Dashboard link	Every page (nav link)
7	Vertical Tab Component	Medium	Custom vertical tab component with left sidebar buttons and right content panel with image overlay. Tab selection changes content dynamically. Requires custom EDS block.	/getting-started-guide	1-2 pages
8	Grouped FAQ Accordion	Medium	Multi-section accordion with "Expand All" toggle, grouped by H2 headings. Support page has 3 groups totaling 11+ collapsible items. Content includes rich text with links and inline images.	/support , /getting-started-guide	2-3 pages
9	Dual Notification Banner System	Low-Med	Two simultaneous notification banners (red + yellow) shown to unauthenticated users. Both dismissible with cookie persistence. Different severity levels with different styling.	All public pages	All pages
10	Embedded Vimeo Videos	Low	Communication/article pages embed Vimeo player for instructional videos. Requires click-to-play pattern or iframe embedding in EDS.	Communication pages (e.g., registration guide)	2-5 pages
11	Download Terms & NDA Gating	Medium	Some downloadable assets require acceptance of Download Terms or Microsoft NDA before access. Lock icons indicate gated content. Access level determined by partner type and agreements.	Asset detail pages, asset carousel cards	~50% of assets

6. Migration Estimates

6.1 Phase Breakdown

Phase	Scope	Effort (days)	Notes
Design System Migration	Global styles, fonts, colors, spacing, CSS custom properties	2-3	Simpler design system than partner.microsoft.com. Fewer color variants. Extract from Sitecore CSS.
Header / Footer / Navigation	Nav bar with dropdowns, simple footer, notification banners	2-4	Simpler dropdowns (single-level). Footer is minimal. Two notification banner variants.
Core Block Development	~11 unique content blocks	12-18	Hero, registration callout, icon cards, CTA banner, carousel, tabs, accordion, asset detail, contact form, share/feedback bar.
Homepage	1 page, high complexity	2-3	After core blocks are built. Carousel is the most complex element.
Content/Guide Pages	~5 pages, high complexity	3-5	Getting started, support, and similar pages with mixed block types.
Communication/Article Pages	~20-40 pages, bulk import	3-5	Standardized structure. Template dev + automated import script + QA sampling.
Asset Detail Pages	~20-60 pages, bulk import	3-5	Standardized layout. Template + "More like this" carousel + automated import.
Contact Form	1 page with server-side form	3-5	Requires form service integration. Cascading dropdowns + CAPTCHA + server processing.
Product Landing Pages	~7 pages (public shells)	2-3	Public portions are simple (hero + registration CTA). Auth content requires separate crawl.
Integration Replacement	Analytics, consent, chatbot, feedback	4-6	Replace Tealium/Clarity/CDP with EDS-compatible equivalents. Cookie consent. Chatbot embed.
Auth Strategy	Authentication and content access control	5-8	Design client-side auth SDK integration, content visibility rules, redirect flows to DPC registration portal.
QA & Visual Regression	All templates, responsive, accessibility	5-8	Desktop + tablet + mobile. Cross-browser. Accessibility compliance. Auth flow testing.

6.2 Overall Estimate Summary

Category	Days	Description
Automated Migration (articles + assets)	6-10	Bulk import ~40-100 communication and asset detail pages using import scripts
Manual Migration (blocks + templates + custom pages)	26-41	Block development, homepage, guide pages, product pages, nav/footer, contact form
Integration & Auth Work	9-14	Analytics, consent, chatbot, auth SDK, registration portal integration
QA & UAT	5-8	Visual regression, responsive, accessibility, auth flow, cross-browser testing
TOTAL (Public Content)	46-73	~10-15 weeks with a small team (2-3 developers)

6.3 Key Risks & Blockers

- **Auth-gated content inaccessible:** ~70-80% of site content is behind authentication. Migration estimates above cover **public content only**. A full authenticated migration requires partner credentials and could **double the effort**.
- **Personalization loss:** Sitecore CDP drives role-based content targeting. EDS has no native equivalent—requires Adobe Target or custom solution.
- **Contact form backend:** Cascading dropdowns + CAPTCHA require a server-side backend or third-party form service (e.g., Adobe Forms, Microsoft Power Automate).
- **External portal dependency:** `dpcregistration.microsoft.com` is a critical external dependency that must continue to function with the migrated site.
- **Asset download gating:** NDA-gated and Download Terms-gated assets require access control that EDS does not natively support.
- **Locale variants:** Estimates assume en-US only. Additional locales would multiply effort.

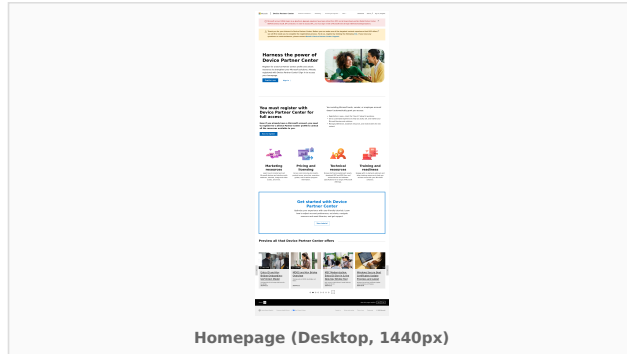

- **noindex/nofollow:** The site has robots: noindex, nofollow meta tag, indicating it is intentionally not indexed. This may impact SEO-driven migration decisions.

6.4 Cost Assumptions

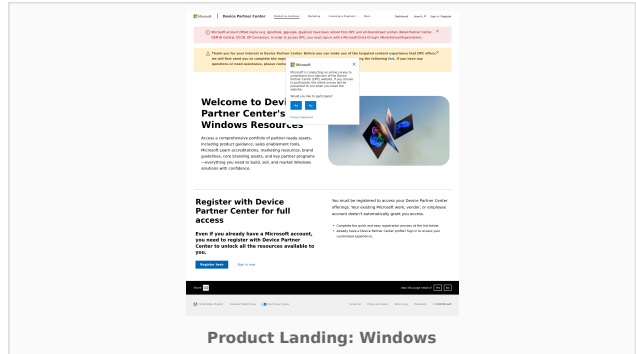

Parameter	Assumption
Team size	2-3 EDS developers
Rate assumption	\$150-200/hour (blended)
Hours per day	8 productive hours
Public content cost range	\$55,000 – \$117,000 USD
Full site (incl. auth content) cost range	\$100,000 – \$200,000 USD
Overall complexity	Medium-High — Auth gating is the primary complexity driver, not the templates themselves

7. Screenshots Reference

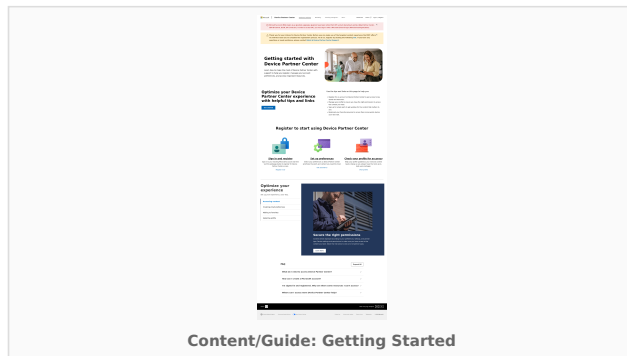

7.1 Page Templates

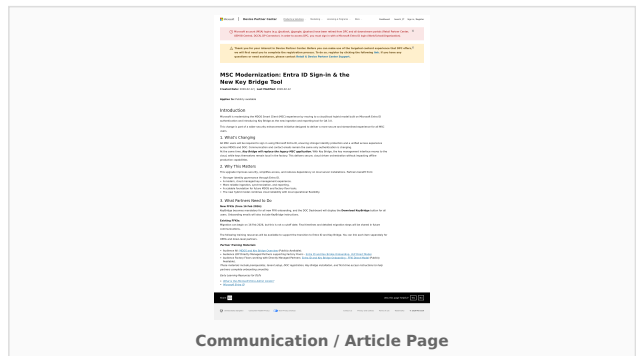

Homepage (Desktop, 1440px)

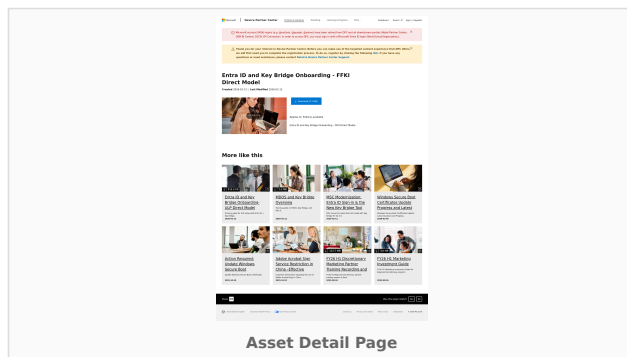

Product Landing: Windows

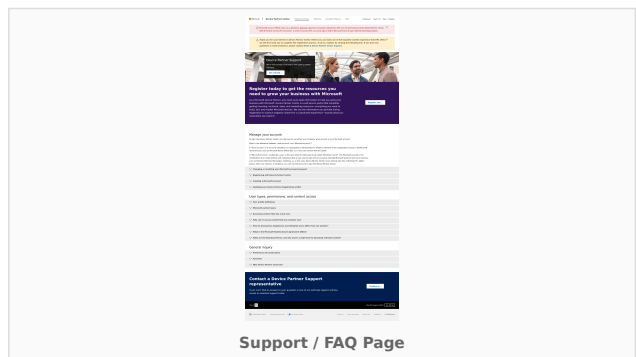

Content/Guide: Getting Started

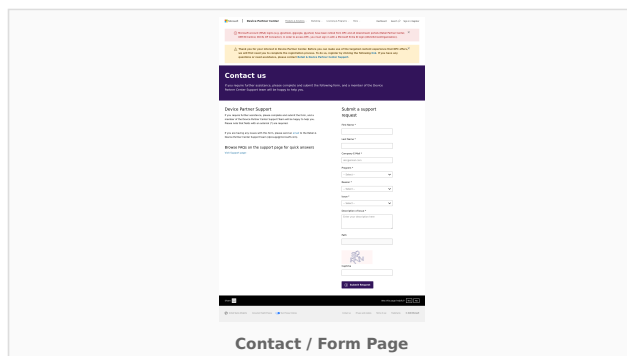

Communication / Article Page

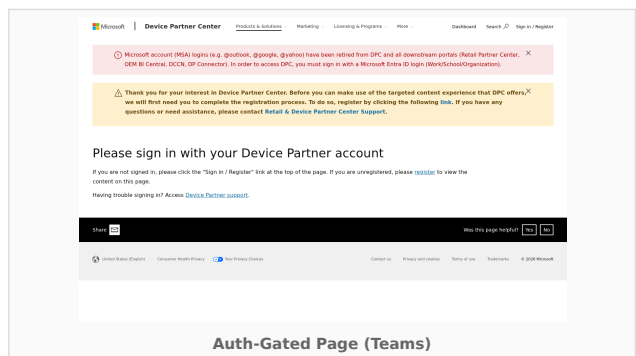

Asset Detail Page

Support / FAQ Page

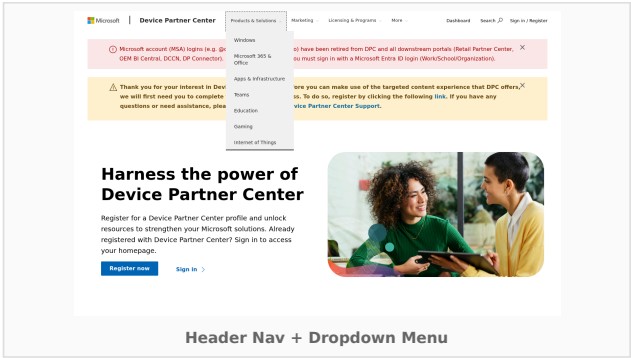

Contact / Form Page

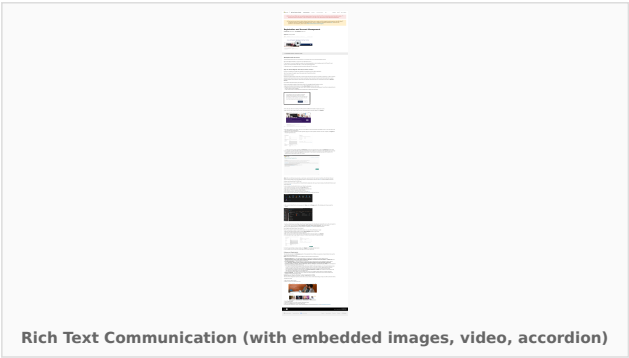

Auth-Gated Page (Teams)

7.2 Block Components

Header Nav + Dropdown Menu

Rich Text Communication (with embedded images, video, accordion)
